## New Version 4.60
### major improvements include:

- *Multiple SIP* service providers

- *911 conference* instantly notifies 3 pre-defined stations

- *Network Time Synchronization* ensures accurate system-wide time

- *Multicast Paging* enables wide scale VoIP Paging with minimal resource requirements

- Enhanced control on *MOBEX (Mobile Extension) feature*

- *VoIP Security / Encryption* for Federal and Commercial security compliance

# V4.60

**loaded with upgrades to improve your client's business and reduce costs**

## improved cost **efficiencies**

Customers who invest in this software upgrade will see the savings grow as **Multicast Paging** and the new **MGI allocations** eliminate the need to overstock on OAS, MGI-16 and MGI-64. **Multiple SIP carriers** allow several ITSP carriers, such as long distance, international and local calls, to be enabled. Lower maintenance costs are gained through **MOBEX,** and **Network Time Protocol support**. System is simple and quick to install.
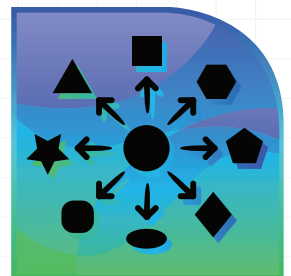

## new sales **opportunities**

Greater assurances from their phone systems will make your clients feel safer, because of the new **911 Conference**, which allows emergency personnel to know exactly where a call originated. And their staff isn't the only aspect of their business that got securer. The updates made to improving **VoIP security** bring V4.60 into Homeland Security level compliance for bundled voice protection.

## the samsung bcs user **experience**

We are a **sales, service and engineering staff** that care about the people and companies we provide for. Many of the enhancements found in V4.60 were created to address the needs of our clients. **E-Mail Gateway** with SSL/TLS security (OfficeServ 7030, 7100, 7200-S only) and **Conference Card** enhancements are among the many user-initated improvements that appear in this software upgrade and make Telephony-centric business easier.

> **"Good job on the 4.60 release** – we have Beta tested all the versions so far and this was the most complete and trouble free we have tested – we are particularly pleased in the improvements in SIP trunking and especially the SIP Faxing – Thanks"
