Product Bulletin

TITLE: DCS COMPACT SPEED DIAL BINS
DATE: JUNE 19, 1995
ISSUED BY: PRODUCT DEPARTMENT

BULLETIN NO.: 040-DCSC
NO. OF PAGES: 1 of 1

As you may be aware, the DCS COMPACT system has a maximum capacity of 1500 speed dial bins. These bins can be assigned to the system list (up to a maximum of 500 bins) or to individual stations (up to a maximum of 50 bins per station). This maximum capacity of 1500 bins can be achieved only with the use of a RAM 2 card. This card has the additional memory necessary to store the additional 1000 bins.

Unfortunately, however, the feature explanations in the *General Description* do not make this requirement clear. Please see the following table for the speed dialing requirements.

500 Speed Dial Numbers	Two chip software version and RAM 1 card
1500 Speed Dial Numbers	Four chip software version (1.2 or higher) and RAM 2 card

When you order a RAM 2 card, it will include the four chip software version necessary to support 1500 speed dial numbers.

The basic rules are as follows:

1. RAM 1 can only be used with the two chip version of system software.
2. RAM 2 can only be used with the four chip version of system software.
