TECHNICAL BULLETIN

Date: December 7, 2000
NO.:   2000-21
TITLE: Speed Dial Flash Issue Solution

Please be informed that in the software versions listed below, programming a flash digit within a speed dial bin string, will not function properly. Upon dialing the speed dial string, the phone system will repeat the flash and not complete the dialing string.

> ➢ Compact: V2.4, 99.10.06

> ➢ DCS 50si: V1.2, 00.03.06

> ➢ DCS: V4.3, 00.03.06

A work around for this problem would be to use the Chain Dialing feature as follows : Activate a speed dial bin then press the flash key then activate another speed dial bin.

This issue will be corrected in the next version of software release, for each product
