SMT-i Series Speakerphone Update

Samsung Telecommunications America (STA) is sending this bulletin to announce an update to the technical documentation relating to Full Duplex speakerphone operation on the recently released SMT-i Series IP desk telephones.

The SMT-i Series phones incorporate 2 different control processes. The SMT-i3105, 5210 and 5220 utilize software algorithms while the premier models (SMT-i5230 and 5243) use hardware DSPs. It has been brought to our attention that, in certain environments, the hardware based 5230 and 5243 speakerphone may perform better than the other models noted above. Consequently, in an effort to meet customer expectations, STA has decided to revise all SMT-i Series documentation to indicate Full Duplex Speakerphone operation for the SMT-i5230 and SMT-i5243 only.

All Samsung OfficeServ documentation will be updated to reflect this announcement. The SMT-i Series telephone brochure on GSBN has been updated and is available for download. Please discard previous brochure versions.

The following other documents will be updated as follows:

1	General Description Manuals for OfficeServ 7030, 7100, 7200-S, 7200 and 7400
2	SMT-i3105, SMT-i5210, SMT-i5220 User Guides
3	SMT-i Series Brochure

If you have any questions regarding this notice, contact your Regional Sales Manager, or your Customer Service Representative at the number provided below, or via email at BCS.Sales@samsung.com
