Software Package v1.6.9.R
For
Samsung Access Points & Access Point Controllers
Available Now!

Samsung Telecommunication America is pleased to announce the availability of software package V1.6.9.R for Access Points and Access Points Controllers (WEC8050 and WEC8500).

Please contact technical Support to obtain this new version. A Samsung Assurance agreement must be active for each site requiring an upgrade.

NEW FEATURES & ENHANCEMENTS in V1.6.9.R

The following new features are available in V1.6.9.R software.

1. [APC boot] An SDK patch is applied regarding DDR3
2. Management for up/down status of 3rd party AP
3. [AP] The performance of buffered forwarding has been enhanced when AirMove works.
4. [APC boot] DDR3 related parameters have been adjusted.
5. Multicast Stream Handover
6. A redirect-address can be configured for captive portal.
7. The system allows stations to use VLAN's secondary IP Zone.
8. Multi-Antenna configuration is supported (WEA302i/303i/403i)
9. Station information is sent to syslog server when it connects to AP.
10. The configure/system/license/analyze CLI command is added

ACCESS POINT COMPATIBILITY

The compatible APC and AP software versions are:

	AP Controller Software	Access Point Software
WEC8500 Controller	wec8500_1.6.9.R	weafama_1.6.9.R
WEC8050 Controller	wec8050_1.6.9.R	weafama_1.6.9.R

NOTE: When upgrading to V1.6.9.R make sure to use the compatible Access Point software.

AVAILABILITY

WLAN Certified technicians/engineers can contact Samsung Technical Support to obtain the APC and AP software for new or existing WEC8500 and WEC8050 sites. Both APC & AP software files are needed.

A Samsung Assurance agreement must be active for each site requiring an upgrade.

CERTIFICATION & TRAINING

This new software does not require any additional certification.   Certified WLAN technicians/engineers will be grandfathered over to this new software version.

The WLAN instructor led course has been upgraded to include V1.6.9.R software additions.
