

UPGRADING THE SVMi USING FTP.

This upgrade is a software file only, and will run on all existing SVMi-20E hardware.

It will be completed by downloading patch file through SVMi's FTP Server.

The attached files are following.

Patch5411_XXX.zip : The changed files compared to previous version(V5.3.X.X)

Follow these steps to install the new software.

WHAT YOU WILL NEED:

1. A SVMi-20E running on a OfficeServ 7200 or 7400 system.
2. A PC connected to the SVMi-20E acting as an administration terminal.
3. It is assumed that your SVMi-20E are connected with Ethernet Cable and IP address of your SVMi is set. If you don't know how to set IP address, please refer to SVM manual.

STEPS:

1. Download the upgrade file and place it on the desktop of the PC and extract it on your temp directory.
2. Execute FTP Server by selecting [G]Operating Utilities and [G]Backup and Restore.
3. Execute any ftp client program(ex.WSFTP) on your desktop and connect with SVMi-20E.
4. Upload the changed files of your PC to the directory of the SVMi-20E

[Notice] If you overwrite \dta\block.tbl, the previous configuration will be lost.

5. Enter "exit" to quit ftp server and return to SVMi program.
6. Shutdown SVMi-20E by selecting [G]Operation Utilities and [D]Shutdown SVMi-20E.
7. Reboot the SVMi-20E
8. Check the version number by selecting [E] System Wide params. The upgrade is now completed

At this point SVMi-20E Version should be V5.4.1.1
